[illegible]

Figure 1 displays two polar plots showing the distribution of perceived and non-perceived directions. The left plot is labeled 'Gauche' and the right plot is labeled 'Droite'. Both plots have a vertical axis from 0 to 40 and a horizontal axis from 90 to 0. The plots show concentric circles representing distance from the center. Data points are categorized as 'Perçus' (green circles), 'Non perçus' (red triangles), and 'Non testés' (open circles). The 'Perçus' points are concentrated at the 0 and 180 degree positions. The 'Non perçus' points are concentrated at the 90 and 270 degree positions. The 'Non testés' points are distributed across the entire range of directions.
